Education

Bennett University

B.Tech in Computer Science & Engineering (AI/ML)

Sep 2022 – May 2026

CGPA: 9.15 / 10.0

Experience

HERE Technologies

July 2025 – Present

Software Development Engineer Intern

Mumbai, India

- **Built an end-to-end pipeline automation framework** for ADAS map production across 6+ automotive programs (BMW, Continental, Subaru, GM-ISA) using GitLab CI/CD, Splunk, AWS S3, and Confluence APIs eliminating manual EOD reporting saving 90+ hours/monthly.
- **Developed automated attribute deviation analysis pipeline** on AWS S3, flagging threshold breaches across 4 classification dimensions and generating stakeholder-ready Excel reports enabling proactive quality gating before customer map releases.
- **Led 30+ root cause analyses** for map attribute deviations across Tier-1 OEM releases (BMW, Continental, Suzuki), diagnosing source vs. software defects across EU and NA regions.
- **Authored ISA speed limit solution specifications** defining regulatory exception rules across 4 country frameworks (Spain, Portugal, Turkey, UK) with vehicle-type fallback logic enabling Continental ADAS map production readiness.

Amazon ML Summer School

July 2024 – August 2024

Mentee

Virtual

- **Selected for an intensive mentorship program** from a highly competitive national pool, gaining specialized training in machine learning directly from Amazon Applied Scientists.
- **Developed expertise in core ML domains** including Deep Learning, Probabilistic Graphical Models, Dimensionality Reduction, and Natural Language Processing.
- **Analyzed industry-standard practices** for building, training, and deploying scalable machine learning architectures to solve complex, real-world engineering problems.

Projects

BankXL – AI-Powered SaaS Platform | Live

Next.js 14, TypeScript, Supabase, Razorpay

- Built and launched a production SaaS converting bank statement PDFs into structured formats (Excel, CSV, JSON) – a live product with Stripe-integrated tiered billing, Supabase auth, and paying users.
- Evaluated Claude Vision and Gemini APIs for document extraction; iterated on prompts, structured-output schemas, and error handling before engineering a hybrid parsing pipeline supporting 20+ Indian bank formats.

StockSwabhava – Scalable Trading Engine | GitHub

React, FastAPI, PostgreSQL, SQLAlchemy

- Architected a full-stack paper-trading app with a transactional order engine, weighted-average buy price, virtual cash management, and bcrypt auth – designed for horizontal scalability.
- Wrote unit and integration tests for all critical trading paths (buy/sell/portfolio), establishing CI-ready coverage across concurrent-user edge cases.

Technical Skills

Languages & Backend: Java, Python, JavaScript, SQL, FastAPI, Node.js, REST APIs

Frontend & Databases: React.js, Next.js, HTML5, CSS3, PostgreSQL, MongoDB, Supabase

DevOps & Testing: CI/CD Pipelines, Git, GitHub, GitLab, Unit Testing, Integration Testing, Automated Test Suites

AI / ML: OpenAI API, Anthropic API, Gemini API, CNN, Deep Learning

AI-First Development: Claude Code, GitHub Copilot, Prompt Engineering, AI Code Review, System Context Design

Achievements

Amazon ML Summer School 2024: Selected among the top 3,000 students nationwide for Amazon's ML program.

Google AI Campus Fest – LegalEase: Top 10 teams nationally for an AI-powered legal document assistant.

Smart India Hackathon: 1st rank in University Project Showcase; Top 15 at HackCBS (10,000+ participants).

LeetCode: 650+ problems solved, 1700+ contest rating – consistently top percentile.
